SWR Analyzers

1.8-500 MHz

The CAA-500 is a very accurate, simple to use SWR and impedance analyzer to find antenna resonance and make quick antenna adjustments. The analog cross-needle meter displays SWR and impedance simultaneously as you sweep the chosen frequency range, instantly providing the information needed.

FTM3100R The new FTM-3100R is a VHF conventional FM mobile transceiver that has all the features the FTM-3200R has, except C4FM Digital mode. The features include a ruggedly built yet compact VHF mobile transceiver, offering Yaesu's legendary mechanical toughness and high output power of up to 65 Watts. This new mobile is equipped with a heavy-duty heat sink that includes an extraordinary FACC; Funnel Air-Convection Conductor (Wind Tunnel). The FACC gathers cool air through a wide open front air-intake and concentrates the air flow to the critical final amplifier area drawn by a rear cooling fan. Thanks to its 3 Watts Front Panel Speaker, you can enjoy superior sound quality and stress-free communications - even in noisy and harsh environments. Like other ever-popular Yaesu VHF mobiles, the expanded receiver coverage of the FTM-3100R is 136 - 174MHz, and provides 220 memory channels with 8 Alpha-numeric Tags consisting of 199 "Regular" memories, one "Home" channel for a favorite frequency or repeater pair, and 10 sets of band-edge memories. IC7610 Whether it is poor band conditions, or battling to pick out a call in a large pile-up, faint signals have always been a challenge for DXers and Contesters around the world. The difference between putting the QSO in the log or having to try another time is the capability of your receiver. One key factor is the RMDR capabilities, the ability to pick out a faint signal in the presence of stronger, adjacent signals. The IC-7610 introduces dual RF direct sampling receivers, achieving 110dB RMDR, rivaling that of top-of-the-line transceivers. MFJ1778M The MFJ-1778M antenna is a multi-band center-fed dipole antenna capable of 1500 Watts. It consists of 52 feet flat-top fed with 17 feet of 450 Ohm matching section ending in an SO-239 coax connector. This antenna generally requires the use of a suitable matching network (antenna tuner) since the SWR of the G5RV JR. is almost certainly not 1:1 on any band. The use of a tuner will guarantee maximum performance from solid-state excitors. MFJ-1778M is a balanced antenna that is fed by an unbalanced coaxial line. This feed system causes unwanted parallel RF currents to appear on the shield of the coaxial feedline. A choke type balun such as the MFJ-915 should be used with this antenna to eliminate or reduce the undesirable parallel feed line currents. Failure to use a choke balun may result in RFI, RF feedback, or other symptoms of RF "in the shack".

MFJ921 The MFJ-921 Dual Band VHF Antenna Tuner covers 2 Meters and 220 MHz. Its built-in SWR/Wattmeter measures SWR in 2 power ranges – 300 or 30 Watts. The meter is usable for both 144 MHz and 220 MHz bands. It will give you low SWR with practically any antenna. The MFJ-921 is designed to match a wide range of impedances for both mobile/base operation. It will handle up to 200 Watts of output power. The antenna tuner has SO-239 input/output connectors, wing nut post ground.

AT1000PROII

The AT-1000Proll has an Auto mode that automatically starts a tuning cycle any time the SWR exceeds a limit you set. Also, there are provisions for two antennas; you can switch between them any time you need. For each antenna, there are 2,000 memories that store tuning parameters for almost instantaneous tuner setting whenever you transmit on or near a frequency you've used before. Just key and it tunes! The AT-1000Proll will operate at any power level between 5 and 1,000 watts peak RF input. The AT-1000Proll has a large, easy to read bargraph with two selectable scale ranges (100 and 1,000 watts) as well as SWR meter. The AT-1000Proll will interface with many popular

transceivers, enabling their TUNE button to control the AT-1000Proll's operation. Dedicated control buttons allow you to fine-tune capacitance and inductance on those rare occasions when the AT-1000Proll can't find a perfect match by itself.

AT100PROII

The LDG AT-100Proll is the next step in the evolution of the automatic tuner. This desktop tuner covers all frequencies from 1.8 - 54 MHz, and will

automatically match your antenna in no time. Updated features include an LED indicator for antenna selection and an LED to indicate when in bypass. It features a two-position antenna switch, allowing you to switch instantly between two antennas. The AT-100Proll requires just 1 watt for operation, but will handle up to 125 watts, making it suitable for everything from QRP to a typical 100 watt transceiver. The AT-100Proll includes over 2,000 memories for each antenna, automatically storing tuning configurations for each frequency and band as you use them. Frequency sensing circuitry lets the AT-100Proll "know" your operating band and frequency. Whenever you transmit on or near a frequency you've used before, the AT-100Proll can retune from memory almost instantly.

features LDG's state-of-the-art, processor-controlled Switched-L tuner. It will match virtually any kind of coax-fed antenna, including Yagis, dipoles, inverted Vs, slopers, loops, just about anything. It will typically match a 10:1 SWR down to 1.5:1 in just a few seconds. You can also use the AT-600Proll with longwires, random wires and antennas fed with ladder line just by adding a balun. The AT-600Proll features two antenna ports with a front-panel indicator showing which is in use, and separate memory banks for each antenna. The optional M-600 4.5" analog meter shows FWD (100 and 600W scales), REV, or SWR in Peak or Average. Easy to read LED bar-graph meters showing RF power, SWR and tuner status, tactile feedback control buttons and an LED bypass indicator complete the user interface. Any power source from 11 - 16 volts DC can be used; the AT-600Proll only draws up to 750mA.

tuner. It will match virtually any kind of coax-fed antenna, including Yagis, dipoles, inverted Vs, slopers, loops, just about anything. It will typically match a 10:1 SWR down to 1.5:1 in just a few seconds. You can also use the AT-200 with longwires, random wires and antennas fed with ladder line with the optional LDG balun. The AT-200 features over 16,000 3D memories, automatically storing tuning data for frequencies and bands as you use them. When you transmit on or near a frequency you've used before, the AT-200 can restore the tuning data almost instantly. It learns as you use it, adapting itself to your operating patterns for faster and faster tuning. The 3D memory system allows up to eight antenna settings to be stored for each frequency.

Z11PROII Meet the Z-11ProII, everything you always wanted in a small, portable tuner designed from the ground up for battery operation. Only 5" x 7" x 1.5", and weighing only 18

ounces, it handles 0.1 to 125 watts, making it ideal for both QRP and standard 100 watt transceivers from 160 - 6 meters. The Z-11ProII uses LDG's state-of-the-art processor-controlled Switched-L tuning network. It will match dipoles, verticals, inverted-Vs or virtually any coax-fed antenna. With an optional LDG balun, it will also match longwires or antennas fed with ladder-line. The Z-11ProII has 2,000 memories automatically storing tuning configurations for each frequency and band as you use them. Frequency sensing circuitry lets the Z-11Pro "know" your operating band and frequency. Whenever you transmit on or near a frequency you've used before, the Z-11ProII returns from memory almost instantly. Full auto mode tunes with SSB. Just speak into the mic and it tunes! Memories are retained indefinitely. Rugged and easy-to-read LEDs indicate SWR and status. The Z-11ProII uses latching relays which retain the tuned configuration even when powered down; current draw when not tuning is effectively zero.

Z817 The Z-817 is the ultimate autotuner for QRP radios including the Yaesu FT-817(D). The Z-817 interfaces to the CAT port (ACC) on the back of the FT-817 radio with the provided cable. Tuning

could not be simpler; one button push on the tuner is all that is needed and the Z-817 takes care of the rest. It will switch to PKT mode, transmit a carrier, tune the tuner, then restore the radio to the previous mode! 2000 memories cover 160 through 6 meters. Of course, the Z-817 will also function as a general purpose antenna tuner with other QRP radios. Just transmit a carrier and press the tune button on the tuner. The Z-817 is powered by four AA internal Alkaline batteries (not included), so there are no additional cables required to use the Z-817. Latching relays are used so that power consumption is Zero when not tuning allowing a set of batteries to last about one year.

AMERITRON
ALS-1300 is a solid state near legal limit FET no-tune

Amplifier. Get instant band switching, no tuning, no

warm-up, no tubes to baby and no fuss! Reliability of the ALS-1300 is insured by using eight rugged MRF-150 power FETs. Ameritron's eight FETs are mounted on the dual heavy duty heat sink. They are properly arranged to spread out the heat over a large surface, something that other amplifiers using a single power device cannot do. Some FETs actually are a package of several transistors in one large case. This concentrates all of the heat in one small package. They not only are more difficult to cool, if one transistor fails they all have to be replaced. The ALS-1300 RF deck operates from 50 Volts for efficient, low distortion linear RF power service. It's cooled by a whisper quiet cooling fan. Fan speed is regulated by temperature sensors, assuring minimum noise for adequate cooling.

AL811HD AL-811HD gives you the AL-811H with four 572B tubes installed. Get a higher power tank circuit and grid overload protection. Grid Overload Protection protects the tubes from excessive grid current due to mistuning and it protects against excessive drive power. Four 572B tubes give you more plate dissipation than a single 3-500Z tube. AL-811HD gives you 800 Watts output in SSB and 600 Watts for continuous duty in CW, RTTY, SSTV and AM operation. AMERITRON mounts the 572B tubes vertically, not horizontally, to prevent hot tube elements from sagging and shorting out. Others, using potentially damaging horizontal mounting, require hard-to-find 572B tubes to retard harmful sagging and shorting.

AL82 The Ameritron AL-82 Linear Amplifier is designed to give you years of trouble free service at the full legal output power limit. An 1800 watt continuous commercial rated Hypersil transformer is standard with heavy duty rectifiers in a full wave bridge supply with computer grade capacitors. Two bias settings allow either high efficiency RTTY and CW operation at 1500 watts of output at nearly 70% plate efficiency or low distortion 1500 watts PEP, SSB or SSTV output.

RCS10L Ameritron's Remote Coax Switch with Lightning Protection lets you remotely switch up to eight HF antennas – so you can replace 8 coax feedlines with a single coax. Eliminate a tangle of troublesome coax and have a simple and neat installation – with just a single coax feedline! The RCS-10L also has added lightning protection to each antenna port. This will protect each antenna from one another and prevent damaging voltages from traveling the feedline into the shack if a lightning strike accrues to the antenna. The RCS-10L consists of two units – the weatherproof switching box that mounts on your tower or mast and the control unit that's placed at your operating station.

RCS8VL RCS-8V HF to VHF/UHF Remote Coax Switch Ameritron's Remote Coax Switch lets you remotely switch up to five separate antennas using one inexpensive small control line (like standard telephone wire). Eliminate a tangle of troublesome coax and have a simple and neat installation with just a single feed line. The RCS-8V consists of two units, the weatherproof switching box that mounts on your tower or mast and the control unit that's placed at your operating station. VSWR is less than 1.2 from DC to 250 MHz and less than 0.1 dB loss at 150 MHz, great for the HF/VHF/UHF operator. It handles over 5 kW below 30 MHz and 1 kW at 150 MHz. You can ground unused positions or leave them open. The indoor control unit is all metal to prevent RFI and TVI. It also has LEDs to indicate the antenna you've selected. A Lexan scratch-proof panel has a markable surface for labeling your antenna positions.

ARX2B The Ringo Ranger II has more gain, less windload, and more mechanical integrity than other two meter antennas. You'll quickly appreciate the benefits of this amazing antenna! Based on

the original W1BX Ringo, the Ringo Ranger II is the latest design featuring three 5/8 wave radiating elements and an adjustable 1/8 wave phasing stub. The result is a very low angle of radiation over your coverage area. The Ringo Ranger II has built-in lightning protection, UV-stabilized insulators, heavy wall tubing, improved decoupling radials to eliminate feedline radiation, and all-weather performance.

A13B2 will be your

choice for high

performance

across the entire 2 meter band. New and experienced hams will enjoy 15.8 dBi gain on FM, packet, CW, or sideband across the 4 MHz operating range. The A13B2 is easily mounted vertically or horizontally for maximum performance on your favorite mode. Its optimum boom length makes it a popular antenna that fits just about anywhere. The new UltraMatch balanced feed on the A13B2 provides a 50 Ohm match via a standard SO-239 UHF female connector.

AR270B This model gives very high gain with a low angle of radiation and it is only 7.7 feet (2.35m) high. The AR-270B is computer optimized with two 5/8 wavelength collinear elements on 2 meters and four 5/8 wavelength elements on 70cm. It is broadbanded for minimum SWR on both bands. It is easy to assemble with three rugged aluminum tubing sections, a durable mast mount and factory sealed coils for best performance.

SILHOUETTE This multiband vertical designs provide 9 band coverage encompassing the 6, 10, 12, 15, 17, 20, 30, 40 and 80 meter bands. Cushcraft achieved a major breakthrough in the development of an HF multiband vertical antenna that has been specifically designed for use with a tuner and amplifier. As a result, the antenna more accurately addresses the needs of the contemporary ham shack. Multiband vertical antennas have always been complicated designs with components as likely to be damaged by high levels of mismatched transmit power as the rigs they are attached to. Before the use of tuners became widespread, the antenna was protected by the same safety mechanisms that protected the rig. Now, the automatic power reduction circuits of the past have actually become a second layer of protective circuitry. Although the auto-tuner provides the ham with a more versatile device as well as protecting the rig's components, the antenna is more vulnerable than ever. With the press of a button, very high

loads can be imposed on the antenna. The result to the antenna can be catastrophic failure in some instances.

AT2K A newly-designed, smaller roller inductor allows the AT2K to tune 6 Meters. Newly designed

capacitors feature lower minimum capacitance for improved high band performance, while maximum capacitance has been increased to 400pF for better low band performance. In addition, the Peak/Peak Hold metering from the PM2000A (a \$149.00 value) has been incorporated into the AT2K. The AT2K matches dipoles, center fed doublets, Verticals, end-fed wire, delta loops, beams, Windoms, Inverted V's and an optional external 4:1 or 1:1 current balun for balanced wire feeders can be purchased. The AT2K features a 6 position ceramic wafer antenna selector switch. Forward power metering is in two ranges, 300 and 3000 watts. A Peak/Peak Hold metering function is also provided. Standing Wave Ratio measurements are displayed with an illuminated cross-needle meter. SWR is read directly from the meter face where the Forward and Reverse needles cross. Add 11 Ga. (.090" thick) iridite-treated aluminum metalwork and durable powder coated finish on the front panel and top cover, and you have a tuner that will grace your shack for years to come.

AT2KD An optional 1:1 or 4:1 current balanced balun can also be purchased, which can be easily connected externally to

the tuner. This new tuner has all our features, such as: peak and peak-hold; a resonant free roller system to operate from 6m to 160m continuously; new LED lit meter system; and a new compact size. Power rating 2000 watts pep, Frequency tuning range 160m to 6m, Impedance matching range 20 ohms to 1200 ohms. Easy and quick tuning with only two controls, 6 position mode switch for multiple antennas, Active Peak and Peak Hold dual cross-needle metering (1-2 sec hold) with LED backlighting, Meter power range 0-300 watts / 0-3000 watts, Differential capacitor tuning with 2 statos and 1 rotor (420 pF - 13pF - 420pF @ 5kV), Palstar designed ceramic body roller inductor, High power ferrite 1:1 or 4:1 current balun (Optional) Externally Installed, Powdercoated front panel and top cover, 12 VDC Wall transformer supplied

AT4K The word is spreading about Palstar's unique, high-end amateur radio products. Carrying on in the Palstar tradition for products of the highest quality designed by Hams for Hams. The

American made AT4K tuner is no exception. The American made AT4K is an impedance matching network that fills the void for a matching network that can provide unbalanced/balanced output. This is a one-of-a-kind unique dual-function high-power tuner in the American Ham tradition. The typical unbalanced tuner with a 4:1 balun at the OUTPUT exposes the balun to a wide variety of impedance and reactance that it was never designed to handle. The solution: the AT4K. The AT4K T-matching network utilizes a 1:1 unbalanced-to-balanced transformer in the INPUT of the network. When the network is properly tuned, a 50 ohm impedance will be presented both to the input and output of the balun, which allows it to properly perform its important transformation job 2500W ROLLER INDUCTOR TUNER

AT5K The American made AT5K is a one-of-a-kind unique dual-function high-power tuner in the American Ham tradition. This tuner has been nick-named the "Rock Crusher" and is fast becoming the tuner of choice among "Hams" who demand the very best and most powerful antenna tuner on the market. The typical unbalanced tuner with a 4:1 balun at the OUTPUT exposes the balun to a wide variety of impedance and reactance that it was never designed to handle. Palstar's original solution was the AT4K. The AT5K takes power handling to the next level coming in with a rating of 3500 watts single tone continuous performance with low losses & wide Z range. Bands 160m to 15m with limited Z range on 10m. The AT5K provides balanced OUTPUT with high power 5kW TEFLON cable balun at the INPUT of the tuner circuit for excellent balanced feed antenna operation. Inside the AT5K you'll find massive custom large plate (600 pF) variable capacitors at 6 kV. Equally massive 10 Amp 7 kV CERAMIC body inductor wound with #10ga plated copper wire with silver-plated wheelshaft, contact wheel, and hardware (35uH). Also, Palstar engineering has incorporated the technology found in our popular PM2000A wattmeter into this tuner to provide dual cross-needle metering with active peak and peak hold (\$149.95 value)

HFAUTOTUNE

The long-awaited Palstar HF-AUTO auto-tuner has finally arrived.

Hams have enjoyed the benefits of low power auto-tuners for years, but now

Palstar takes it to the next level and offers auto-tuning with a power rating of 2 Watts to 1500 watts. Like all Palstar products the HF-AUTO was designed by Hams for Hams carrying on the Palstar tradition for high-quality products designed and made in the USA. Auto-tuners have been around for years, but most of them use clacking relays and lumped components so that the match is always just a little bit off. Palstar reinvented the auto-tuner with continuously variable components for a perfect match every time, and capped it off with a power rating of 2 Watts to 1500 watts.

The PM2000A Watt Meter is no exception. The PM2000A measures and displays forward power, reflected power, and SWR simultaneously on its dual movement meter system in the frequency range. Accuracy of the readings is assured because the WM150 features a true shielded directional coupler. The backlit meter can display either peak or average power readings, and has 300 and 3000 watt range settings.
